

# Boone Hospital Center Outpatient Services Entrance

The project transforms 3,000 square feet of space on Boone Hospital Center's Ground Floor of the Outpatient Tower Entry and Lobby to blend seamlessly with the existing building in both its exterior expression and interior look and feel. In order to improve patient comfort and energy efficiency in the Lobby, a new revolving door coupled with a new sliding door system was provided at the Exterior Vestibule. Once inside the building, the finishes upgrades were selected to compliment the new Patient Care Tower Lobby featuring durable terrazzo flooring and warm cherry wood paneling.

Additionally, to improve patient way-finding and access, a new registration desk was installed in direct line of sight from the Vestibule entrance. The waiting areas adjacent to the registration desk have been enhanced with mosaic wall tiles, custom planter boxes and increased seating capacity. The contiguous Lobby, Waiting and Registration areas provide seating for the Harris Breast Center and Nuclear Medicine departments. This Lobby Renovation project provides better patient access, a more comfortable space and an overall look that is consistent with the main lobby of the hospital.

## LOCATION

Columbia, Missouri

## DESCRIPTION

2,609 sf interior renovation of Outpatient Services Entrance

## COMPLETION DATE

June 2015

## CLIENT REFERENCE

Katlyn Hays, Project Manager, Planning Design & Construction
