

Boone Hospital Center Pediatric Wing

Bubbles and hues of soft blues and purples, 'porthole' light fixtures and wavy glass create an immersion into an aquatic themed Pediatric Unit. Renovation of this 3,621 sf unit included an eight bed Pediatric Nursery with satellite nurse station to accommodate the needs of infants transitioning down from intensive care and also children lacking parental involvement. Full height window walls and sliding doors allow for communication and visual connection between the main and satellite nurse stations and allow soft natural light to stream through the bubble adorned glass walls into the main corridor. Additionally, two private rooms, two semiprivate/isolation rooms, play area, treatment area and ancillary service areas all carry varying levels of the aquatic theme.

Located at the end of, and accessed through, the patient-occupied 2nd floor wing, SOA incorporated special considerations for construction phasing and the contractor's use of the premises in the project documents.

*"When it comes to hospital renovations, where timelines and phasing are critical, responsiveness is key. With SOA located so close to Boone Hospital, we relied on their ability to quickly and creatively help with construction coordination questions. **Time and again on projects, SOA generated design solutions with great attention to detail and approached construction administration with the same diligence. I would highly recommend working with SOA.**"*

- Susan Brandt, Boone Hospital Center Project Manager

LOCATION

Columbia, Missouri

DESCRIPTION

Multi-phased extensive remodel of existing 3,621 sf Pediatric Wing of the hospital

COMPLETION DATE

October 2004

CONSTRUCTION COST

\$500 thousand
